

Intelligence, with intention.

Ayan is an applied AI and automation studio for business leaders working through operational complexity. We help organizations decide where intelligence belongs, connect the work around it, and build systems people can use with confidence.

CAPABILITIES

AI strategy & discovery

Define the business problem, assess constraints and data readiness, and establish a practical direction with explicit decision criteria.

Workflow automation

Design connected processes with clear ownership, human review, exception handling, and a considered path from pilot to operation.

Knowledge systems

Make organizational knowledge easier to find and use, with source visibility, access boundaries, and a way to evaluate answer quality.

LEGAL NAME

Ayan LLC

TRADING BRAND

Ayan

WEBSITE

withayan.com

A clear basis for the work.

Begin with the business context

Share the process, decision, or knowledge problem that needs attention. Identify the business owner, current systems, constraints, and what a useful outcome would look like.

Agree the scope in writing

The proposal or services agreement defines deliverables, exclusions, responsibilities, fees and currency, dependencies, review points, acceptance, and the applicable cancellation and refund terms.

Set the data boundaries

Discuss confidentiality, permitted data, access, providers, retention, and any contractual security requirements before sharing project material. A separate data-processing agreement may be appropriate to the engagement.
